

ARTIST.DEV PROJECT AUDIT RECAP

Read-only technical, visual, and UX audit

Audit date: September 6, 2026

EXECUTIVE SUMMARY

Artist.Dev is a personal creative portfolio for a frontend developer and UI designer.

It uses a monochrome editorial visual language with anime-inspired artwork, file/window metaphors, hard borders, offset shadows, monospace metadata, and motion effects.

The project is an early-stage static portfolio prototype. The browsing structure exists, but the production build is blocked by a missing image import. Project imagery, social links, demos, source links, and contact submission are incomplete.

TECH STACK

Next.js 16 App Router | React 19 | TypeScript | Tailwind CSS v4

Framer Motion | Lucide React | Radix UI Toast and Tooltip | ESLint

OVERALL STATUS: EARLY-STAGE PROTOTYPE / PARTIALLY COMPLETE

ARCHITECTURE

Browser

- > Next.js App Router
- > Root Layout
- > Navigation, TooltipProvider, Toaster
- > Page route
- > WindowFrame, Framer Motion, Lucide icons
- > Static PROJECTS data and local React state

There is no backend path: no API, database, authentication, persistence, or server data fetching. Project data is hardcoded in lib/data.ts. Works filtering uses local state. Project details use a local slug lookup. Contact copying uses the Clipboard API.

IMPORTANT FILES

- app/layout.tsx Global layout, metadata, fonts, providers
- app/page.tsx Home page
- app/works/page.tsx Filterable project archive
- app/works/[slug]/page.tsx Dynamic project detail
- app/about/page.tsx Profile and skills
- app/contact/page.tsx Contact UI
- components/ Navigation, WindowFrame, UI primitives
- hooks/use-toast.ts In-memory toast state
- lib/data.ts Static project records
- app/globals.css Theme variables and global styles

ROUTES AND USER FLOWS

/ Introduction, CTAs, social icons, character artwork - PARTIAL
/works Filterable archive of six projects - PARTIAL
/works/[slug] Dynamic project detail - PARTIAL
/about Profile and skills - BROKEN
/contact Email copy and message form - PARTIAL
404 Custom not-found page - PRESENT WITH LINT ISSUES

GLOBAL FLOW

[Home] -> [Works] -> [Filter] -> [Project Detail]
| -> Back to Works
| -> Live Demo placeholder
| -> Source placeholder
+--> [About] (blocked by missing asset)
+--> [Contact] -> Copy email -> Toast
Message form -> preventDefault only

COMPLETE: route navigation, filtering, slug matching, unknown-project 404 fallback.

PARTIAL: project browsing, social navigation, detail actions, email copying.

BROKEN: production build and About route due to missing image.

MISSING: contact delivery, real external URLs, mobile navigation, loading/error states.

UI AND DESIGN SYSTEM

Visual identity: monochrome editorial portfolio with software-window and artist-studio references. The strongest visual surfaces are Home, Works, and WindowFrame.

Palette: near-black, off-white, light gray, gray borders, green online status, and a defined red destructive token.

Typography: CSS declares Inter, Space Grotesk, and JetBrains Mono, while the layout loads Geist and Geist Mono. This is inconsistent.

Layout: Tailwind containers, six-unit horizontal padding, desktop grids, responsive stacking at md/lg breakpoints.

Shapes: mostly square controls, thin black borders, offset black shadows, small rounded window-control dots.

Effects: dotted background, backdrop blur, grayscale images, hover transforms, motion entrances.

RESPONSIVE FINDINGS

- Desktop navigation is visible; links disappear below md.
- No mobile menu replaces the hidden navigation.
- Works cards stack on mobile; desktop uses two columns.
- Rotated frames and offset decoration may create narrow-screen overflow.
- No mobile-specific accessibility or interaction strategy is present.

FUNCTIONALITY AND ASSETS

WORKING

- Navigation structure and active route state
- Works category filtering
- Project slug lookup and unknown-project fallback
- Toast rendering and motion effects

PARTIALLY WORKING

- Project archive: data works, images do not.
- Project details: metadata works, external links do not.
- Contact: fields and email copy render, submission does not send.
- Social actions: icons render, destinations are href="#".

MISSING ASSETS

- app/assets/images/oc-character.png
- /projects/neural-canvas.jpg
- /projects/pixel-poetry.jpg
- /projects/aurora-studio.jpg
- /projects/retro-arcade.jpg
- /projects/quantum-visualizer.jpg
- /projects/minimalist-blog.jpg

PRESENT ASSETS

- public/assets/image/cover-web.png: monochrome anime-style character illustration.
- Starter SVGs and public/projects/placeholder.html appear unused.

BUILD EVIDENCE AND RISKS

CONFIRMED BUILD BLOCKER - npm run build fails because app/assets/images/oc-character.png cannot be resolved.

CONFIRMED TYPE CHECK FAILURE - npx tsc --noEmit reports that the imported StaticImageData is incompatible with the raw img source type.

CONFIRMED LINT FAILURE - npm run lint reports five errors and six warnings, including unescaped apostrophes, a raw anchor to /, an unused icon import, and raw image warnings.

P0 CRITICAL

- Production build failure.
- All six project card images are absent.

P1 HIGH

- Contact form does not send data.
- External links are placeholders.
- Mobile navigation is missing.
- Lint and TypeScript checks fail.

P2 MEDIUM

- Duplicate WindowFrame under src/components/components.
- Font-token mismatch and weak focus/accessibility states.
- No loading, empty, or error states.
- pattern-dots is referenced but not defined.

RECOMMENDED ROADMAP

1. Restore or replace the missing About image and resolve the image type/build issue.
2. Add valid project images or update project records to valid assets.
3. Fix TypeScript and ESLint errors.
4. Replace placeholder social, demo, and source links.
5. Choose and implement a real contact delivery path.
6. Add mobile navigation and test narrow-screen overflow.
7. Add form validation, loading, success, and failure states.
8. Consolidate the duplicate WindowFrame and align font configuration.
9. Remove unused dependencies/assets after confirming they are not planned features.
10. Run browser-based responsive and accessibility checks after the build passes.

FINAL ASSESSMENT

The project has a clear visual direction and a usable portfolio skeleton. It is not production-ready because the build is broken, core imagery is absent, and the primary contact and external-project journeys are placeholders.

This recap was generated from a read-only audit. No application source files were changed.
